PARIS EDO™ EMAIL & FAX

PARIS EDO™ Email & Fax

The PARIS EDO™ Email & Fax service is an optional module which allows automated transmission of documents from PARIS Spooler, to email addresses and or fax numbers, with production class results.

How It Works

The PARIS EDO™ service is responsible for processing documents (formatted by the PARIS Spooler) and their associated meta-data. The service will poll the output directory specified in the PARIS Spooler and when a job arrives a job ticket will be presented along with a formatted document. The file is converted to either a PDF or TIFF, formatted, created, and sent via email, fax or both, automatically. The PARIS EDO™ console is included as a monitoring tool, to configure, manage, and view progress and error reports.

EDO™ Email Features

The PARIS EDO™ Email & Fax module provides the following email features:

- Email address is automatically derived from the input data file
- Look-up functionality available to link other data to email address
- Suppression feature available if no email address in data file or look-up table
- Documents may be attached as either PDF or TIFF depending on application requirements
- Attachments may be suppressed and a simple message created
- Sender address may be global or taken from input data file or look-up table
- Carbon copy available
- Supports Receipt Request
- Email subject may be global or taken from the input data file
- Message may be fixed or variable
- Message may be full formatted HTML file
- Signature files may be added
- Additional attachments may be added to email
- Mail server authentication supported

EDO™ Fax Features

The PARIS EDO™ Email & Fax module provides the following fax features.

- Fax address is automatically derived from the input data file
- Submits faxes into the standard Windows Fax system, thereby providing full fax management
- Look-up feature available if no fax number in data file
- Fax suppression if no fax number in data or look-up table
- Recipient's name may be taken from input data file
