PARIS SPOOLER

PARIS Spooler

The ability to create and output dynamic documents on demand, at high speed and at the point of need, dramatically reduces costs and makes information available faster and more efficiently.

PARIS Spooler is the engine and output-control utility that provides complete automated control of document production throughout your organization.

Output what you want, how you want, when and where you want it, with PARIS Spooler.

How It Works

PARIS Spooler directs the flow of data and ensures that the correct set of formatting rules, set by PARIS Designer, are merged and output to the pre-programmed destination.

Up to 512 different output destinations can be defined and serviced per a single PARIS Spooler license, with the ability to implement multiple installs of PARIS Spooler, your output control and number of output destinations are limitless.

PARIS Spooler is completely automated, requiring little or no operator intervention; once deployed it can be left to perform its operational duties. It acts as a print server controlling the flow of information between the host system and the target printers. Design rules are destination-independent, so the same document can be output to any destination at any time.

The PARIS Spooler control panel is intentionally designed to have the look and feel of an operating system print spooler. The layout is intended to provide a simple, clean and familiar interface containing all the necessary information on the status of the destinations being controlled by PARIS.

Feature Highlights

- Multi-thread processing for optimal speed
- Intervention free document formatting & delivery
- Multiple input sources
- Multiple output destinations
- Support for up to 512 destinations per single license
- Multiple PARIS Spoolers may be running per site
- Hold and priority print capabilities
- Queue monitoring and device control

Integrating with other PARIS Products

Once a document has been designed in PARIS Designer, it can be seamlessly integrated with PARIS Spooler for output via paper to printers, and or electronically via EDO™ Email & Fax and EDO™ Archive. Add PARIS AutoMail® for a great ROI.
